Introduction

Model and Serial Numbers

The contents of this manual must be understood by the user to ensure that the correct part for the correct machine model is selected.

Some equipment built by Melco containing the same "common" name may be identified by more than one model part number. In some cases, a different serial number sequence is also prevalent between two models of the same machine.

This manual represents the initial release of the Melco model EMB 10/6T Embroidery Machine. The machine part number is 10400.

Determine the model number of your machine before you use this manual to order parts. The machine MODEL number is located on the identification plate that is placed on the lower right front of the chassis.

Remember, although many parts are identical between the various embroidery peripheral models, this manual should only be used for identifying and ordering parts for the machines described above.

How To Use This Manual

The manual is divided into several sections, each containing a set of parts most common to each other, or to a function of the machine.

Part Numbers

The part numbers found in the first column of the parts list on the pages adjacent to the illustration are the numbers identifying the parts. These are the Melco part numbers to reference when ordering parts for replacement on the machine.

SPECIAL INSTRUCTIONS

An *Italicized* part number is NOT a readily available spare part - You MUST call Melco Service for information on price and availability.

Part numbers in **Bold Text** ARE readily available spare parts - You may place your order directly with Melco by faxing or emailing a completed order form.

NOTE: You will find a blank FAX - PART ORDER FORM at the end of this Introduction. Be certain you supply all your credit card information, or indicate COD on the order form.

If you need to discuss your parts requirement situation before ordering, you may also contact Melco Service at 1-303-457-2025.

Part numbers with one or more asterisk (*) beside them indicate they are ONLY available as part of a larger assembly as indicated in the notes at the end of the part list page. Part numbers in any given illustration with the same number of asterisks are for the same larger assembly.

A part number with one or more pound (#) sign beside it is an indication there is a special note at the end of the part list page explaining the particular situation with that part.

Illustrations

Accompanying each section is an illustration showing the general area of the machine that is represented in that section. Parts are identified in the illustrations with arrows associated with their part numbers pointing to the part with that number. Letters contained in circles generally are used to refer the user to a different illustration or section of the manual that identifies the assembly with more detail. Part numbers, quantities, and part descriptions for the parts called out in the illustrations are found on the following pages adjacent to the illustrations.

Quantities

The second column in the parts list identifies how many times the part is used in that illustration.

Part Descriptions

Each part listed has a descriptive name in the third column of the parts listing. Hardware (such as screws, washers, etc.) are described by size in order to help the user to identify common hardware items that can be obtained by local sources if desired.

CAUTION: When purchasing hardware from a source other than Melco, it is the user's responsibility to ensure that such hardware is of sufficient quality and grade to meet or exceed Melco's original equipment hardware. Melco assumes no liability for the use of inadequate hardware that was purchased by and/or installed by other than an authorized Melco factory representative.
